Test Case Register

StackStorm e-commerce platform | Backend API, Customer Storefront, Admin Console | Generated 2026-11-03

This register indexes every automated test suite across the three repositories, grouped by test file. Detailed per-test-case tables (Test Case ID, preconditions, input, expected/actual output) for the curated functional-requirement test cases remain in `documents/testing/test-register-customer.md` and `test-register-admin.md` per SENG 34213 s6.3.3 format. This consolidated register instead gives full coverage of **every** test file in the codebase (hundreds of individual test cases), so one row here is one test *file*/suite rather than one test case.

Last execution: 2026-11-03, local stack (PostgreSQL 16, Redis 7). Backend 73/73 Jest suites (584/584 tests) passed. Storefront 242/242 Vitest tests passed. Admin console 178/178 Vitest tests passed. All Playwright E2E specs listed below passed on their last recorded run (2026-10-27).

1. Backend API (Jest) — 73 suites / 584 tests

3.2 End-to-end tests (Playwright, 5 spec files)

Test file	Type	Suite / scenario	Status
e2e/auth.spec.js	E2E	Staff sign-in and roles	**Pass**
e2e/catalog-stock.spec.js	E2E	A manager adds a product, restocks a size, archives and deletes it	**Pass**
e2e/fulfilment.spec.js	E2E	A manager finds a paid order, ships it with tracking and marks it delivered; cancelling a paid order restocks it and reports the refund	**Pass**
e2e/returns.spec.js	E2E	A manager approves a return, inspects the parcel and the customer is refunded	**Pass**
e2e/support.spec.js	E2E	A support agent takes a waiting chat, replies and resolves it	**Pass**

4. Not covered by automation

• Live Stripe refunds: automated runs use the mock provider; a refund must be checked manually in Stripe test mode before release.
• Production nginx headers for the admin console: no Docker daemon was available in this environment; `docker run --rm stackstorm-admin nginx -t` and a `curl -I` check should be run on staging.
• Dedicated load/performance testing was not previously wired into CI — see `performance-report.pdf` for the manual load test run to cover this gap.
